

VENDING AREAS

Vending Areas: In each building, at least one area is to be provided for the installation of vending machines. The size and numbers of these areas is to be appropriate for the size and usage of the building. Each vending area is to be accessible from a public corridor but is to be separated from it such that individuals can use the machines without obstructing the corridor, especially if it is an egress corridor.

Vending areas are to be located near a building service entrance and/or near an elevator that is near a service entrance to facilitate restocking and service with minimal impact to the building and its occupants.

Vending machines locations are not to be designed to obstruct ventilation system components.

Vending areas are to be provided with required ventilation, electrical, and plumbing.
